### ABSTRACT

With the development of new technologies at all times and the increase of competition among organizations, it is essential that they seek to achieve quality in the development of their applications. An essential tool for this is Function Point Analysis (FPA). This makes it important for students to have contact with this technique as early as possible. Thus, this study aims to use the concepts of gamification to stimulate the support for teaching and engaging students' motivation in the subject of Software Quality taught in the graduate course in computer science at UFPA. For this, classes were defined to teach the FPA technique that used elements of games as motivation for the students. Therefore, this research resulted in an enrichment of the

Feedback

the teaching of the FPA technique for students, aiming at a better preparation for the software development market. It was also verified that the use of gamification elements for the teaching
